Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 October 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Election/Restrictions

1. Claims 13-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 10/28/2003.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 3, 5, 8, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Mandel et al.
4. Mandel et al discloses a method of forming a powder coating. A resin, curing agent and liquefiable gas are placed in a vessel (column 2, lines 27-42), the temperature and pressure in the vessel are adjusted to the supercritical range for the gas (column 3, lines 39-49), the resin is solvated, and the resin mixture is discharged and the pressure is reduced (column 4, lines 19-29). The preferred gas is carbon dioxide (column 3, line 51). A plasticizer can be added to the resin mixture (column 6, line 36). The gas is transferred between two pressure vessels (12, 14).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1732

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1, 4, 6 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mandel et al.

7. Mandel et al is described above. Mandel et al does not specifically indicate that the resin is cured at below 140°C, however, this would have been obvious to one of ordinary skill in the art because Mandel et al's process is to prevent premature reaction (column 1, lines 55-57) and the preferred temperature in the vessel is 31-100°C, therefore the cure temperature is above 100°C and includes temperatures of at least 101 to 140°C. Mandel indicates that the material may be milled (column 6, lines 68-61). Calendering would achieve the milling. Mandel et al does not indicate the molecular weight range of the resin, however, applicant's range would have been obvious to one of ordinary skill in the art from optimization of the process parameters and the indication that various resins can be used in the process (column 6, lines 20-28).

Allowable Subject Matter

8. Claims 7 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary Lynn F. Theisen whose telephone number is 571-272-1210. The examiner can normally be reached on Thursday and Friday 6:30-4:00.
